

EMISSIONS/DEVELOPMENT ENGINEER, SENIOR

INGENCO is a Richmond-based leader in the rapidly growing field of distributed electricity generation. We have a nationwide reach and are the largest producer of renewable energy in Virginia.

We are seeking an intelligent, highly motivated individual to lead our emissions reduction effort. INGENCO currently operates 15 distributed energy generating plants which incorporate over 400 reciprocating engines. As part of our commitment to clean, renewable energy, we have a technology initiative to develop and implement specific emission reduction strategies within the next few years.

The ideal candidate will have a Bachelor's or Master's degree in chemical or mechanical engineering with emphasis on combustion and thermodynamics. Ten to fifteen years experience is required in engine development, combustion, engine control and emission reduction strategies.

This is an excellent opportunity for an individual who works well with minimal supervision and who desires interesting and challenging work without the corporate bureaucracy found in a large company. The successful candidate will be "hands-on" and be comfortable working in both the office and the test cell environment.

Salary is commensurate with experience. Benefits include medical, life, and disability insurance; 401(k)/ Profit Sharing Plan; and paid vacation and holidays. To be considered for this opportunity, please send resume and salary history in confidence to:
