

Biomedical Technology Internship

Revivicor Inc, a leader in the field of transgenic animal production for use as medical products, seeks applicants for a semester internship.

The intern will work as a member of a team toward accomplishing specific goals associated with product development and regulatory affairs. These activities include planning and execution of tasks associated with novel transgenic animals, and animal tissue derivatives for use as human use medical products. Product development tasks may include assisting in the design of experiments; corresponding with vendors; helping with procurement, dissection and fabrication of tissue products; preparing literature reviews; and summarizing results via reports or slideshows.

Upper division or graduate students in biological sciences or engineering with an interest in biomedical applications are welcome to apply for this position. Applicants with exceptional writing skills who have the ability to take initiative, work independently, and are available for at least 25 hours per week are encouraged to apply.
